Calibration

Lots of grading, but lots of you!

Best bet (especially for HW): Take turns
- Drastically reduces calibration issues
- Easier to work around volunteer schedules

If necessary for projects, split submissions
- Avoid this when you can; can create difficulties

Remember to **calibrate**
- Ensure students aren't advantaged/disadvantaged by who grades their assignment
- Grade a few as a team to shake out uncertainties
- Necessary both *within* and *across* assignments
